

Proposed city water supply goals and performance measures

1. Reduce total treated water consumption in the City 30% from the 2000 level by 2020 and 40% by 2030.
2. Reduce volume of purchases of water originating outside the County by 35% by 2020 and 45% by 2030.
3. Increase production of recycled water (indirect potable reuse or other sources) to 10% of total delivered within the City by 2020 and 25% of total by 2030.
4. Establish program for treatment and recycling of storm water, constituting 20% of total water delivery with the City by 2020 and 30% by 2030.
5. Establish program for conversion of landscaping to drought-tolerant planting, to include minimum of 5,000 residential lots and 500 commercial sites per year, to commence by end of 2013.
